

Assignment: Role-Based Login System with Sessions & Dashboards (PHP + MySQL)

\Objective:

Build a complete **Login/Signup System** using **sessions** and **role-based redirection**.

The system must include **three roles**:

- **Admin**
- **Doctor**
- **Patient**

Each role should have its own **dashboard** with different functionalities.

Functional Requirements

1. Signup (Registration System)

- Create a **signup form** with:
 - Full Name
 - Email
 - Password (hashed)
 - Role (Admin / Doctor / Patient) → dropdown select
- Store user data in MySQL database.
- Email must be **unique**.
- Password must be **hashed using password_hash()**.

2. Login System

- Login using Email + Password.
- Authenticate using:

password_verify()

- After successful login:
 - Create session → `$_SESSION['user']`
 - Redirect based on **role**:
 - Admin → admin/dashboard.php
 - Doctor → doctor/dashboard.php
 - Patient → patient/dashboard.php

3. Session Handling

- Every dashboard page must:
 - Verify session
 - Restrict unauthorized access
- Example:

```
if (!isset($_SESSION['user'])) {  
    header("Location: ../login.php");  
    exit;  
}
```

Dashboard Requirements (Role-Based Pages)

A) Admin Dashboard

Admin can:

1. View **all users** (Admin, Doctors, Patients)
2. See total number of:
 - a. Doctors
 - b. Patients
3. Must display a **Bootstrap table** showing: **(optional)**
 - a. User ID
 - b. Name
 - c. Email
 - d. Role
 - e. Created At

B) Doctor Dashboard

Doctor can:

1. See **total number of patients** in the system

(Count from database)

2. Display list of all patients: **(optional)**
 - a. Patient Name
 - b. Email
 - c. Created At
3. Simple welcome message:

“Welcome Dr. __”

C) Patient Dashboard

Patient can:

1. View **their own information**:
 - a. Name
 - b. Email
 - c. Registration Date
2. Simple message:

“Welcome, Patient __”

Database Requirements

Create a database named: **yourname_db**

Create a table:

users Table

Column	Type
id	INT (PK, AI)
name	VARCHAR(100)

email	VARCHAR(100) UNIQUE
password	VARCHAR(255)
role	ENUM('admin','doctor','patient')
created_at	TIMESTAMP DEFAULT CURRENT_TIMESTAMP

Pages to Create

Main Pages

- signup.php
- login.php
- Logout.php (**session_destroy()**)

Dashboards

- admin/dashboard.php
- doctor/dashboard.php
- patient/dashboard.php

Common Files

- config.php → database connection
- auth/check.php → session checking file (optional)

Tasks

Task 1: Create Database & Users Table

Write complete SQL for:

- database creation
- table creation
- insert one default admin manually (optional)

Task 2: Build Signup Page

- Form validation
- Check duplicate email
- Hash password
- Insert user into table
- Show success/fail messages

Task 3: Build Login Page

- Validate credentials
- Verify hashed password
- Start session
- Redirect based on role

Task 4: Role-Based Dashboards

Admin:

- Display all users
- Count users by role

Doctor:

- Count patients
- List patients

Patient:

- Show own profile only

Task 5: Secure All Pages

- Redirect to login if no session
- Restrict dashboard if wrong role

Example:

```
if ($_SESSION['user']['role'] != 'admin') {  
    exit("Access Denied");  
}
```

Bonus Task (Optional)

- Add logout button
- Use Bootstrap for all UI
- Add “change password” page
- Add “profile page” for doctor & admin

Submission Requirements

Students must submit:

✓ **Project Folder (zip)**

✓ **SQL File (database.sql)**

✓ **PDF with Screenshots:**

- Signup page
- Login page
- Admin dashboard
- Doctor dashboard
- Patient dashboard
- Session verification working

Grading Criteria

Feature		Marks
Signup + Validation	20	
Login + Sessions	20	
Role-based Redirection	15	

Admin Dashboard (All Users)	15
Doctor Dashboard (Patients Count)	15
Patient Dashboard (Own Profile)	10
UI & Proper Coding Style	5
